Objectives & Outline

Memory
Management
in C

malloc & free

Memory
Management
in C++

new & delete
Array

Placement new
Restrictions

Overloading
new & delete

Summary

- Understand the dynamic memory management in C++

Module Outline

Module 10

Partha Pratim
Das

Objectives & Outline

Memory
Management
in C

`malloc` & `free`

Memory
Management
in C++

`new` & `delete`
Array
Placement `new`
Restrictions

Overloading
`new` & `delete`

Summary

- Memory management in C
 - `malloc()` & `free()`
- Memory management in C++
 - `new` and `delete`
 - Array `new[]` and `delete[]`
 - Placement `new()`
 - Restrictions
- Overloading `new` and `delete`

Module 10: Lecture 17

Module 10

Partha Pratim
Das

Objectives & Outline

Memory
Management
in C

malloc & free

Memory
Management
in C++

new & delete
Array
Placement new
Restrictions

Overloading
new & delete

Summary

- Memory management in C
 - malloc() & free()
- Memory management in C++
 - new and delete
 - Array new[] and delete[]
 - Placement new()
 - Restrictions

Program 10.01/02: malloc() & free(): C & C++

Module 10

Partha Pratim
Das

Objectives &
Outline

Memory
Management
in C
malloc & free

Memory
Management
in C++

new & delete
Array
Placement new
Restrictions

Overloading
new & delete

Summary

C Program

```
#include <stdio.h>
#include <stdlib.h>

int main() {
    int *p = (int *)malloc(sizeof(int));
    *p = 5;

    printf("%d", *p);

    free(p);

    return 0;
}
-----
5
```

C++ Program

```
#include <iostream>
#include <cstdlib>
using namespace std;

int main() {
    int *p = (int *)malloc(sizeof(int));
    *p = 5;

    cout << *p;

    free(p);

    return 0;
}
-----
5
```

- Dynamic memory management functions in `stdlib.h` header for C (`cstdlib` header for C++)
- `malloc()` allocates the memory on heap
- `sizeof(int)` needs to be provided
- Pointer to allocated memory returned as `void *` – needs cast to `int *`
- Allocated memory is released by `free()` from heap
- `calloc()` and `realloc()` also available in both languages

Program 10.02/03: operator new & delete: Dynamic memory management in C++

Module 10

Partha Pratim Das

Objectives & Outline

Memory Management in C

malloc & free

Memory Management in C++

new & delete

Array Placement new Restrictions

Overloading new & delete

Summary

- C++ introduces operators new and delete to dynamically allocate and de-allocate memory:

malloc() & free()	Operators new & delete
<pre>#include <iostream> #include <cstdlib> using namespace std; int main() { int *p = (int *)malloc(sizeof(int)); *p = 5; cout << *p; free(p); return 0; } ----- 5</pre>	<pre>#include <iostream> using namespace std; int main() { int *p = new int(5); cout << *p; delete p; return 0; } ----- 5</pre>
<ul style="list-style-type: none"> ● Function malloc() for allocation on heap ● sizeof(int) needs to be provided ● Allocated memory returned as void * ● Casting to int * needed ● Cannot be initialized ● Function free() for de-allocation from heap ● Library feature – header cstdlib needed 	<ul style="list-style-type: none"> ● Operator new for allocation on heap ● No size specification needed, type suffices ● Allocated memory returned as int * ● No casting needed ● Can be initialized ● Operator delete for de-allocation from heap ● Core language feature – no header needed

Program 10.02/04: Functions: operator new() & operator delete()

Module 10

Partha Pratim
Das

Objectives &
Outline

Memory
Management
in C

malloc & free

Memory
Management
in C++

new & delete
Array
Placement new
Restrictions

Overloading
new & delete

Summary

- C++ also allows operator new and operator delete functions to dynamically allocate and de-allocate memory:

malloc() & free()	new & delete
<pre>#include <iostream> #include <cstdlib> using namespace std; int main() { int *p = (int *)malloc(sizeof(int)); *p = 5; cout << *p; free(p); return 0; } ----- 5</pre>	<pre>#include <iostream> #include <cstdlib> using namespace std; int main(){ int *p = (int *)operator new(sizeof(int)); *p = 5; cout << *p; operator delete(p); return 0; } ----- 5</pre>
<ul style="list-style-type: none"> ● Function malloc() for allocation on heap ● Function free() for de-allocation from heap 	<ul style="list-style-type: none"> ● Function operator new() for allocation on heap ● Function operator delete() for de-allocation from heap

There is a major difference between operator new and function operator new(). We explore this angle more after we learn about classes

Program 10.05/06: Operators new[] & delete[]: Dynamically managed Arrays in C++

Module 10

Partha Pratim Das

Objectives & Outline

Memory Management in C

malloc & free

Memory Management in C++

new & delete
Array
Placement new
Restrictions

Overloading
new & delete

Summary

malloc() & free()	new[] & delete[]
<pre>#include <iostream> #include <cstdlib> using namespace std; int main() { int *a = (int *)malloc(sizeof(int)* 3); a[0] = 10; a[1] = 20; a[2] = 30; for (int i = 0; i < 3; ++i) cout << "a[" << i << "] = " << a[i] << " "; cout << endl; free(a); return 0; } ----- a[0] = 10 a[1] = 20 a[2] = 30</pre>	<pre>#include <iostream> using namespace std; int main() { int *a = new int[3]; a[0] = 10; a[1] = 20; a[2] = 30; for (int i = 0; i < 3; ++i) cout << "a[" << i << "] = " << a[i] << " "; cout << endl; delete [] a; return 0; } ----- a[0] = 10 a[1] = 20 a[2] = 30</pre>
<ul style="list-style-type: none"> • Allocation by malloc() on heap • # of elements implicit in size passed to malloc() • Release by free() from heap 	<ul style="list-style-type: none"> • Allocation by operator new[] (different from operator new) on heap • # of elements explicitly passed to operator new[] • Release by operator delete[] (different from operator delete) from heap

Program 10.07: Operator new(): Placement new in C++

Module 10

Partha Pratim
Das

Objectives &
Outline

Memory
Management
in C

malloc & free

Memory
Management
in C++

new & delete
Array
Placement new
Restrictions

Overloading
new & delete

Summary

```
#include <iostream> using namespace std;
int main() {
    unsigned char buf[sizeof(int)* 2]; // Buffer on stack

    // placement new in buffer buf
    int *pInt = new (buf) int (3); int *qInt = new (buf+sizeof(int)) int (5);

    int *pBuf = (int *)(buf + 0); int *qBuf = (int *)(buf + sizeof(int));
    cout << "Buf Addr  Int Addr" << endl;
    cout << pBuf << " " << pInt << endl << qBuf << " " << qInt << endl;
    cout << "1st Int  2nd Int" << endl;
    cout << *pBuf << " " << *qBuf << endl;

    int *rInt = new int(7); // heap allocation
    cout << "Heap Addr  3rd Int" << endl;
    cout << rInt << " " << *rInt << endl;
    delete rInt;           // delete integer from heap

    // No delete for placement new

    return 0;
}

-----
Buf Addr  Int Addr
001BFC50  001BFC50
001BFC54  001BFC54
1st Int   2nd Int
3         5
Heap Addr  3rd Int
003799B8   7
```

- Placement new operator takes a buffer address to place objects
- These are not dynamically allocated on heap – may be allocated on stack
- Allocations by Placement new operator must not be deleted

Module 10: End of Lecture 17

Das

Objectives &
Outline

Memory
Management
in C

malloc & free

Memory
Management
in C++

new & delete
Array

Placement new
Restrictions

Overloading
new & delete

Summary

- Overloading operator new and delete

Mixing malloc, operator new, etc

- Allocation and De-Allocation must correctly match. Do not free the space created by new using free(). And do not use delete if memory is allocated through malloc(). These may results in memory corruption

Allocator	De-allocator
malloc()	free()
operator new	operator delete
operator new[]	operator delete[]
operator new()	No delete

- Passing NULL pointer to delete operator is secure
- Prefer to use only new and delete in a C++ program
- The new operator allocates exact amount of memory from Heap
- new returns the given pointer type – no need to typecast
- new, new[] and delete, delete[] have separate semantics

Program 10.08: Overloading operator new

Module 10

Partha Pratim
Das

Objectives &
Outline

Memory
Management
in C

malloc & free

Memory
Management
in C++

new & delete
Array
Placement new
Restrictions

Overloading
new & delete

Summary

```
#include <iostream>
#include <stdlib.h>
using namespace std;
```

```
void* operator new(size_t n) { // Definition of new
    cout << "Overloaded new" << endl;
    void *ptr;
    ptr = malloc(n);           // Memory allocated to ptr
    return ptr;
}

void operator delete(void *p) { // definition of delete
    cout << "Overloaded delete" << endl;
    free(p);                   // Allocated memory released
}

int main() {
    int *p = new int; // calling overloaded operator new
    *p = 30;           // Assign value to the location
    cout << "The value is :\t" << *p << endl;
    delete p;          // calling overloaded operator delete
    return 0;
}
```

```
Overloaded new
The value is : 30
Overloaded delete
```

- operator new overloaded
- The first parameter of overloaded operator new must be size_t
- The return type of overloaded operator new must be void *
- The first parameter of overloaded operator delete must be void *
- The return type of overloaded operator delete must be void
- More parameters may be used for overloading
- operator delete should not be overloaded (usually) with extra parameters

Program 10.09: Overloading operator new[]

Module 10

Partha Pratim Das

Objectives & Outline

Memory Management in C

malloc & free

Memory Management in C++

new & delete Array Placement new Restrictions

Overloading new & delete

Summary

```
#include <iostream>
#include <cstdlib>
using namespace std;
```

```
void* operator new [] (size_t os, char setv) { // Fill the allocated array with setv
    void *t = operator new(os);
    memset(t, setv, os);
    return t;
}
```

```
void operator delete[] (void *ss) {
    operator delete(ss);
}
```

```
int main() {
    char *t = new('#')char[10]; // Allocate array of 10 elements and fill with '#'

    cout << "p = " << (int) (t) << endl;
    for (int k = 0; k < 10; ++k)
        cout << t[k];
}
```

```
delete [] t;
return 0;
}
```

```
-----
p = 19421992
#####
```

- operator new[] overloaded with initialization
- The first parameter of overloaded operator new[] must be size_t
- The return type of overloaded operator new[] must be void *
- Multiple parameters may be used for overloading
- operator delete [] should not be overloaded (usually) with extra parameters
